Preface to the Third Edition *page* xvii
Preface to the Second Edition xix
Preface to the First Edition xxi

1 Introduction 1
1.1 Introduction 1
1.2 Advantages of Panel Data 4
1.3 Issues Involved in Utilizing Panel Data 10
1.3.1 Unobserved Heterogeneity across Individuals and over Time 10
1.3.2 Incidental Parameters and Multidimensional Statistics 13
1.3.3 Sample Attrition 13
1.4 Outline of the Monograph 14

2 Homogeneity Tests for Linear Regression Models (Analysis of Covariance) 17
2.1 Introduction 17
2.2 Analysis of Covariance 18
2.3 An Example 24

3 Simple Regression with Variable Intercepts 31
3.1 Introduction 31
3.2 Fixed-Effects Models: Least-Squares Dummy Variable Approach 34
3.3 Random Effects Models: Estimation of Variance-Components Models 39
3.3.1 Covariance Estimation 40
3.3.2 Generalized Least-Squares (GLS) Estimation 41
3.3.3 Maximum-Likelihood Estimation 45

Published online by Cambridge University Press

3.4 Fixed Effects or Random Effects 47
3.4.1 An Example 47
3.4.2 Conditional Inference or Unconditional (Marginal) Inference 48
3.5 Tests for Misspecification 56
3.6 Models with Time- and/or Individual-Invariant Explanatory Variables and Both Individual- and Time-Specific Effects 58
3.6.1 Estimation of Models with Individual-Specific Variables 58
3.6.2 Estimation of Models with Both Individual and Time Effects 61
3.7 Heteroscedasticity and Autocorrelation 64
3.7.1 Heteroscedasticity 64
3.7.2 Models with Serially Correlated Errors 65
3.7.3 Heteroscedasticity Autocorrelation Consistent Estimator for the Covariance Matrix of the CV Estimator 68
3.8 Models with Arbitrary Error Structure – Chamberlain π-Approach 69
Appendix 3A: Consistency and Asymptotic Normality of the Minimum-Distance Estimator 75
Appendix 3B: Characteristic Vectors and the Inverse of the Variance–Covariance Matrix of a Three-Component Model 77

4 Dynamic Models with Variable Intercepts 80
4.1 Introduction 80
4.2 The CV Estimator 82
4.3 Random-Effects Models 84
4.3.1 Bias in the OLS Estimator 85
4.3.2 Model Formulation 86
4.3.3 Estimation of Random-Effects Models 89
4.3.4 Testing Some Maintained Hypotheses on Initial Conditions 106
4.3.5 Simulation Evidence 107
4.4 An Example 108
4.5 Fixed-Effects Models 111
4.5.1 Transformed Likelihood Approach 112
4.5.2 Minimum Distance Estimator 114
4.5.3 Relations between the Likelihood-Based Estimator and the GMM 116
4.5.4 Issues of Random versus Fixed-Effects Specification 119

Published online by Cambridge University Press

4.6 Estimation of Dynamic Models with Arbitrary Serial Correlations in the Residuals 121
4.7 Models with Both Individual- and Time-Specific Additive Effects 122
Appendix 4A: Derivation of the Asymptotic Covariance Matrix of Feasible MDE 129
Appendix 4B: Large N and T Asymptotics 130

5 Static Simultaneous-Equations Models 136
5.1 Introduction 136
5.2 Joint Generalized Least-Squares Estimation Technique 140
5.3 Estimation of Structural Equations 144
5.3.1 Estimation of a Single Equation in the Structural Model 144
5.3.2 Estimation of the Complete Structural System 149
5.4 Triangular System 152
5.4.1 Identification 153
5.4.2 Estimation 155
5.4.3 An Example 162
Appendix 5A 164

6 Variable-Coefficient Models 167
6.1 Introduction 167
6.2 Coefficients that Vary over Cross-Sectional Units 170
6.2.1 Fixed-Coefficient Model 170
6.2.2 Random-Coefficient Model 172
6.3 Coefficients that Vary over Time and Cross-Sectional Units 180
6.3.1 The Model 180
6.3.2 Fixed-Coefficient Model 182
6.3.3 Random-Coefficient Model 183
6.4 Coefficients that Evolve over Time 186
6.4.1 The Model 186
6.4.2 Predicting β_t by the Kalman Filter 188
6.4.3 Maximum-Likelihood Estimation 191
6.4.4 Tests for Parameter Constancy 192
6.5 Coefficients that Are Functions of Other Exogenous Variables 193
6.6 A Mixed Fixed- and Random-Coefficients Model 196
6.6.1 Model Formulation 196
6.6.2 A Bayes Solution 198
6.6.3 Random or Fixed Differences? 201
6.7 Dynamic Random-Coefficients Models 206
6.8 Two Examples 212

Published online by Cambridge University Press

6.8.1 Liquidity Constraints and Firm Investment Expenditure 212
6.8.2 Aggregate versus Disaggregate Analysis 217
6.9 Correlated Random-Coefficients Models 220
6.9.1 Introduction 220
6.9.2 Identification with Cross-Sectional Data 221
6.9.3 Estimation of the Mean Effects with Panel Data 223
Appendix 6A: Combination of Two Normal Distributions 228

7 Discrete Data 230
7.1 Introduction 230
7.2 Some Discrete-Response Models for Cross-Sectional Data 230
7.3 Parametric Approach to Static Models with Heterogeneity 235
7.3.1 Fixed-Effects Models 236
7.3.2 Random-Effects Models 242
7.4 Semiparametric Approach to Static Models 246
7.4.1 Maximum Score Estimator 247
7.4.2 A Root-*N* Consistent Semiparametric Estimator 249
7.5 Dynamic Models 250
7.5.1 The General Model 250
7.5.2 Initial Conditions 252
7.5.3 A Conditional Approach 255
7.5.4 State Dependence versus Heterogeneity 261
7.5.5 Two Examples 264
7.6 Alternative Approaches for Identifying State Dependence 270
7.6.1 Bias-Adjusted Estimator 270
7.6.2 Bounding Parameters 274
7.6.3 Approximate Model 276

8 Sample Truncation and Sample Selection 281
8.1 Introduction 281
8.2 An Example – Nonrandomly Missing Data 292
8.2.1 Introduction 292
8.2.2 A Probability Model of Attrition and Selection Bias 292
8.2.3 Attrition in the Gary Income-Maintenance Experiment 296
8.3 Tobit Models with Random Individual Effects 298
8.4 Fixed-Effects Estimator 299
8.4.1 Pairwise Trimmed Least-Squares and Least Absolute Deviation Estimators for Truncated and Censored Regressions 299

Published online by Cambridge University Press

8.4.2 A Semiparametric Two-Step Estimator for the Endogenously Determined Sample Selection Model 311
8.5 An Example: Housing Expenditure 313
8.6 Dynamic Tobit Models 317
8.6.1 Dynamic Censored Models 317
8.6.2 Dynamic Sample Selection Models 324

9 Cross-Sectionally Dependent Panel Data 327
9.1 Issues of Cross-Sectional Dependence 327
9.2 Spatial Approach 329
9.2.1 Introduction 329
9.2.2 Spatial Error Model 332
9.2.3 Spatial Lag Model 333
9.2.4 Spatial Error Models with Individual-Specific Effects 334
9.2.5 Spatial Lag Model with Individual-Specific Effects 335
9.2.6 Spatial Dynamic Panel Data Models 336
9.3 Factor Approach 337
9.4 Group Mean Augmented (Common Correlated Effects) Approach to Control the Impact of Cross-Sectional Dependence 342
9.5 Test of Cross-Sectional Independence 344
9.5.1 Linear Model 344
9.5.2 Limited Dependent-Variable Model 348
9.5.3 An Example – A Housing Price Model of China 350
9.6 A Panel Data Approach for Program Evaluation 352
9.6.1 Introduction 352
9.6.2 Definition of Treatment Effects 352
9.6.3 Cross-Sectional Adjustment Methods 354
9.6.4 Panel Data Approach 359

10 Dynamic System 369
10.1 Panel Vector Autoregressive Models 370
10.1.1 "Homogeneous" Panel VAR Models 370
10.1.2 Heterogeneous Vector Autoregressive Models 377
10.2 Cointegrated Panel Models and Vector Error Correction 379
10.2.1 Properties of Cointegrated Processes 379
10.2.2 Estimation 381
10.3 Unit Root and Cointegration Tests 386
10.3.1 Unit Root Tests 386
10.3.2 Tests of Cointegration 394
10.4 Dynamic Simultaneous Equations Models 397
10.4.1 The Model 397

Published online by Cambridge University Press

10.4.2 Likelihood Approach 398
10.4.3 Method of Moments Estimator 401

11 Incomplete Panel Data 403
11.1 Rotating or Randomly Missing Data 403
11.2 Pseudo-Panels (or Repeated Cross-Sectional Data) 408
11.3 Pooling of Single Cross-Sectional and Single Time Series Data 411
11.3.1 Introduction 411
11.3.2 The Likelihood Approach to Pooling Cross-Sectional and Time Series Data 413
11.3.3 An Example 416
11.4 Estimating Distributed Lags in Short Panels 418
11.4.1 Introduction 418
11.4.2 Common Assumptions 419
11.4.3 Identification Using Prior Structure on the Process of the Exogenous Variable 421
11.4.4 Identification Using Prior Structure on the Lag Coefficients 425
11.4.5 Estimation and Testing 428

12 Miscellaneous Topics 430
12.1 Duration Model 430
12.2 Count Data Model 438
12.3 Panel Quantile Regression 445
12.4 Simulation Methods 448
12.5 Data with Multilevel Structures 453
12.6 Errors of Measurement 455
12.7 Nonparametric Panel Data Models 461

13 A Summary View 464
13.1 Benefits of Panel Data 464
13.1.1 Increasing Degrees of Freedom and Lessening the Problem of Multicollinearity 464
13.1.2 Identification and Discrimination between Competing Hypotheses 465
13.1.3 Reducing Estimation Bias 467
13.1.4 Generating More Accurate Predictions for Individual Outcomes 468
13.1.5 Providing Information on Appropriate Level of Aggregation 468
13.1.6 Simplifying Computation and Statistical Inference 469

Published online by Cambridge University Press

13.2 Challenges for Panel Data Analysis 469
13.2.1 Modeling Unobserved Heterogeneity 469
13.2.2 Controlling the Impact of Unobserved Heterogeneity in Nonlinear Models 470
13.2.3 Modeling Cross-Sectional Dependence 471
13.2.4 Multidimensional Asymptotics 472
13.2.5 Sample Attrition 472
13.3 A Concluding Remark 473
